FULL-TIME SECURITY SOFTWARE

Effective Defense Against All Malware

Is a member of the Cyber Security Cluster IN
Turkey

www.cypoint.com.tr

What does it do ?

Supported platforms

- WINDOWS
- LINUX
- CENTOS
- DEBIAN
- UBUNTU
- PARDUS

Thousands of Web Shells, Exploits, and Malware Scanners are available to help you maximize your protection.

Activate suspicious files by removing them before they arrive or quarantining them using the quarantine feature provided by your security software.

By monitoring your CYDEFENDER servers on a regular basis, you can keep them safe.

When there is a change in a file or directory, an SMS is sent and an e-mail is sent.

Launching malicious attacks and sending spam with PHP, ASP, ASPX, PYTHON, JSP, and many more extensions prohibits files from being loaded.

Stay on track with **CYDEFENDER**

Be secured with **CYDEFENDER**

It keeps any exploit that infects your server from propagating to the rest of your network.

suspicion about files push notifications forehead to your server

It actively scans all modified files in user accounts in the background, regardless of how they were installed.

Data will be exploited by their soles to defend against software damage.

Even encrypted data are detected as suspicious.

The testing of certified specialists has been authorized.

İNTERNET SECURITY AND DOMAIN
NAME SERVER SERVICES SOFTWARE

PROTECT AND MONITOR YOUR DOMAIN SERVER FROM THE
SINGLE CENTRAL PANEL

Is a member of the Cyber Security Cluster IN
Turkey

www.cypoint.com.tr

CYINTERNOD can be preferred in many different categories such as corporate promotional web pages, e-commerce pages, news sites, media sites, corporate sites or banks.

In particular, it can prevent service interruptions caused by heavy traffic.

CYINTERNOD can prevent cyber attacks thanks to its security features ve site and can take security measures to protect their data.

You can use hundreds of servers in a cluster structure and control the large amount of traffic coming to your page. In this way, you can take security measures against DDOS and similar attacks.

It has successfully completed the tests in a system like Economist, which has 200 thousand unique and 1.5 million multiple users per day.

What is CYINTERNODE ?

CYINTERNODE is a software that can produce analysis for your domain name server and take security measures, and helps speed up your website with the optimization methods it contains.

- By enabling DDOS protection, you may allow genuine visitors to log in after the waiting/verification screen.

- By enabling BOTNET protection, you may prevent and filter bots that exceed the time-request limit (rate-limit).

- You may add further protection by using a one-time password from your mobile device to log in to a certain location or directory of your website.

- You can safeguard your sites against XSS assaults.

- You can prevent 99 percent of spam forms from being delivered through your website.

- By putting your website in maintenance mode, you may temporarily halt visitor requests.

- With AMP (Accelerated mobile pages), which helps your content rank high in search engines, you can activate your site right now with just a few adjustments.

- With the files you upload to the Internode virtual files area, you may provide exceptional material to your visitors without logging into the host account on your source server.

- With permanent and temporary redirection, you may send the requests arriving to your sites to the pages you wish.

- You may connect certain pathways on your website to other websites and run them as a subfolder of your site.

- Page answers can be saved to system memory or the file system cache.

- You can lower file size by adjusting the quality of your image-content files.

- You can speed up page opens by postponing the execution time of Javascripts on your page.

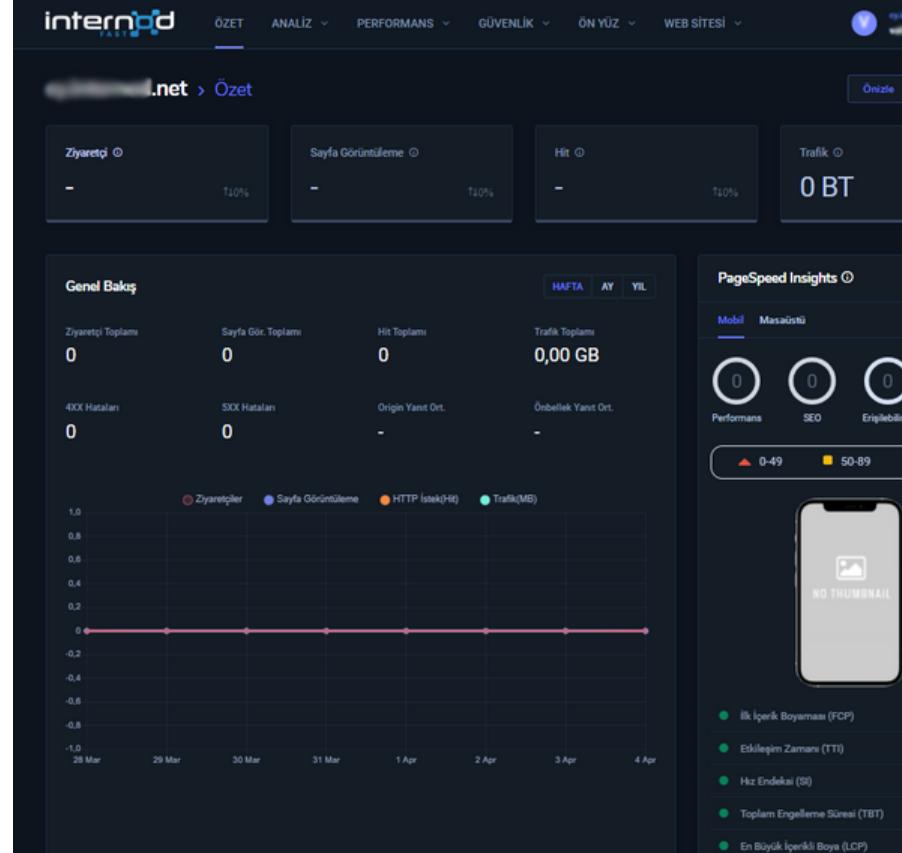

- By optimizing your files with javascript, css, and html content types, you may minimize their size.

- You may compress dynamic and static material by up to 40% using compression methods, allowing the server to respond faster and reducing server bandwidth.

- You can ensure the reliability of your source servers by dispersing the traffic that reaches them.

- With daily generated reports, you may examine and compare visitor and server statistics.

- With statistics, you can monitor site traffic, evaluate what expenditures need to be made on the site, and acquire a variety of data.

ADVANCED EMAIL SERVICE | E-MAIL 2.0

ALMOST UNLIMITED EMAIL STORAGE CAPACITY

Is a member of the Cyber Security Cluster IN
Turkey

www.cypoint.com.tr

CYMAIL, which includes nearly limitless e-mail storage capacity, end-to-end encryption supported by SSL/TSL security protocols, DNS Record Management, Who is hiding, and free domain name parking, allows you to manage all of your domain names and user accounts from a single screen via the admin console. It is a sophisticated e-mail service.

WORK WITH CYMAIL AND SOLUTION FOCUS

- ? Can the company's e-mails be moderated and sent outside the company?
✓ Yes. The administrator sends a confirmation email.
- ? Is it feasible to manage reservation and appointment processes automatically and without wasting time?
✓ Yes, you receive AI email accounts that you may use to communicate with others.

Email 2.0 with CYMAIL

- It authorizes your associated workers to send e-mails on behalf of the firm. As a result, e-mails sent on behalf of the firm are under your control.
- Artificial intelligence lightens your load with e-mail accounts.
- Learn more about the features provided by domestic and foreign providers in Turkey's e-mail industry.

E-mail provider that develops its own technology.

Developed by the market-leading company's thought tank.

The first and only domestic SaaS e-mail service in Turkey.

Market volume is high.

• BACKUP SOFTWARE FOR NETWORK
DEVICES

BACK UP DIFFERENT NETWORK DEVICES FROM CENTRAL
PANEL

Is a member of the Cyber Security Cluster IN
Turkey

www.cypoint.com.tr

With its user-friendly interface, CyNetConfig streamlines network device configuration and backup operations.

It saves time by publishing settings to several network devices at the same time.

With the introversion option, you may go back to your earlier settings.

**CYNETCONFIG MAKES IT
EASY TO MANAGE YOUR
NETWORK DEVICES.**

What is CYNETCONFIG ?

CYNETCONFIG allows you to manage all of your devices from a single panel, and everything is accessible via a simple interface.

Centralized configuration management for network devices of many manufacturers and types.

In the event of a disaster, it allows you to backup your settings and restore them from the backup.

User authorization and access control are provided.

Allows for direct terminal access.

supported platforms

SOFTWARE AND DEVICE FOR MEDIA
MONITORING

INSTANTLY FOLLOW THE SITUATIONS
OF IMPORTANT PLACES

Is a member of the Cyber Security Cluster IN
Turkey

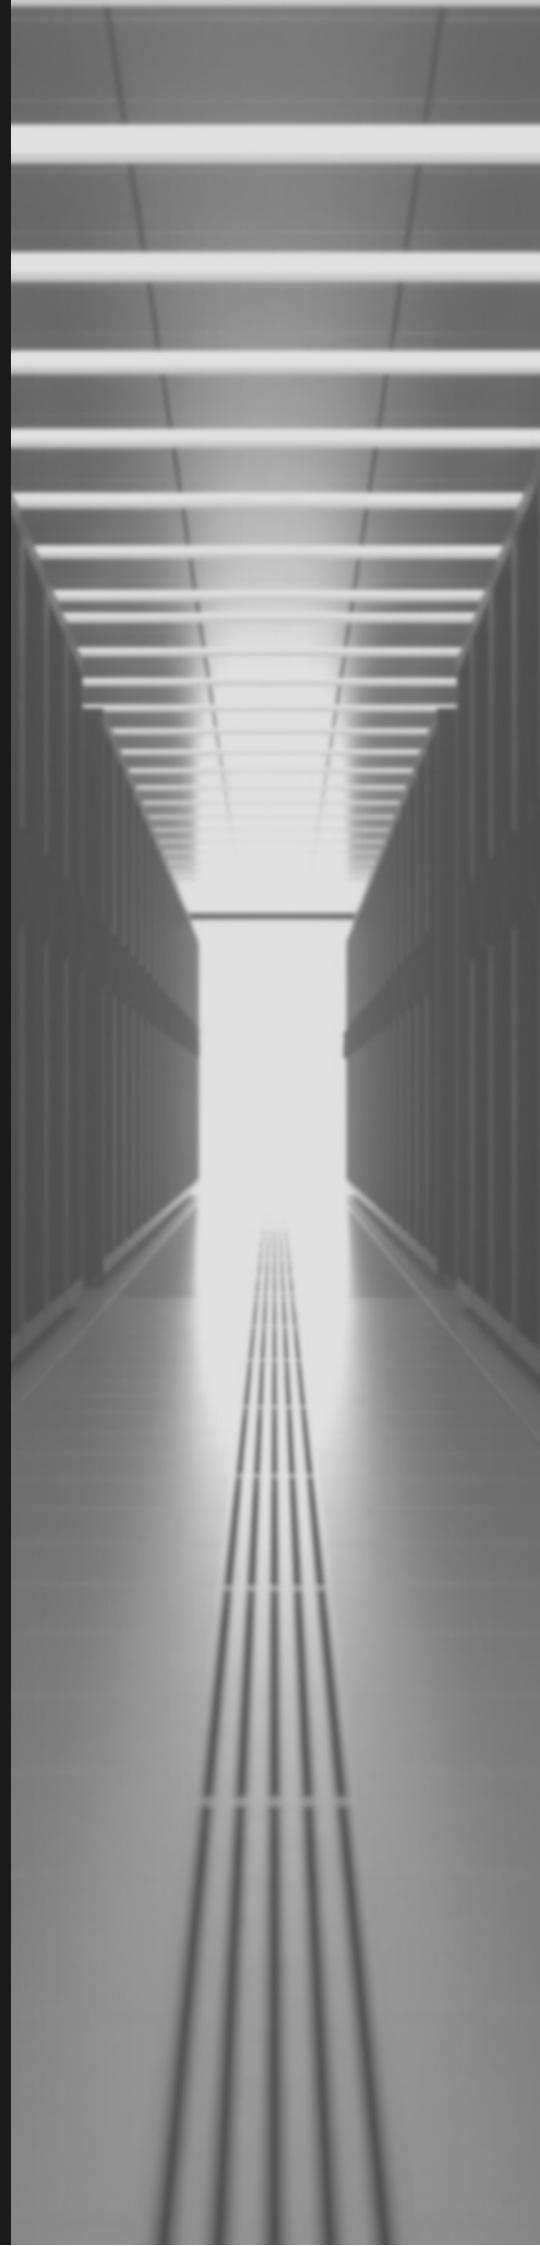

www.cypoint.com.tr

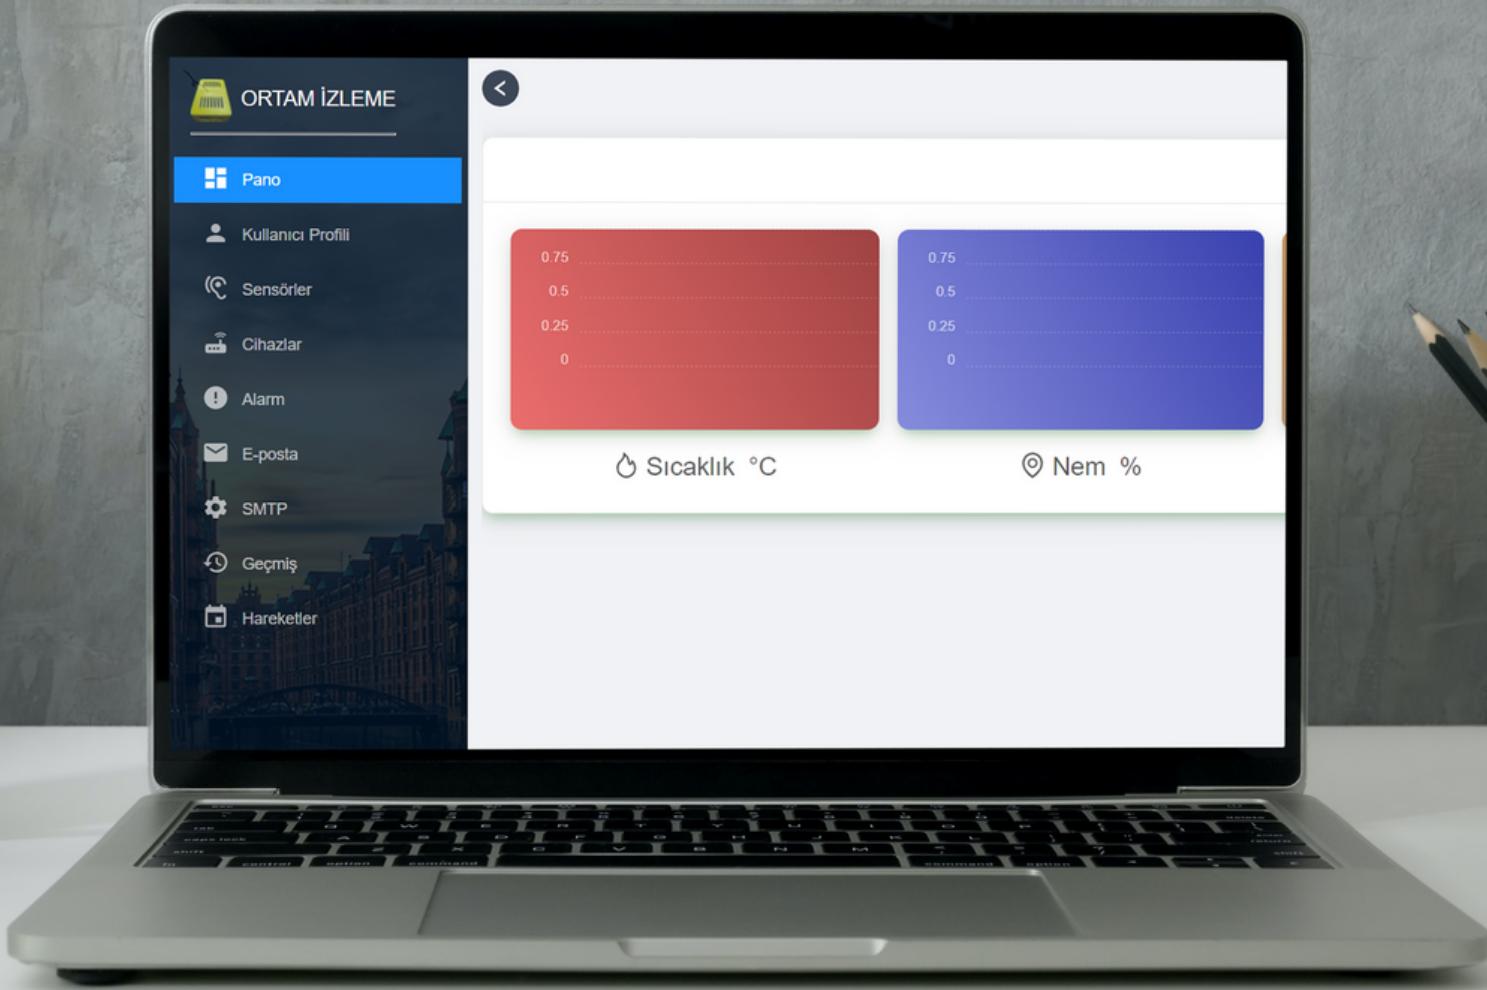

FOLLOW THE SITUATIONS OF IMPORTANT PLACES INSTANTLY

It is intended to be a device that provides instant information via various sensors such as temperature, humidity, and smoke in system rooms, cold storages, or cold chain monitoring. It is entirely unique software and card design. Sensors such as water leakage, air quality, oxygen, carbon monoxide, and door sensor can be added to the CYSENSE card.

KEEP UP WITH CYSENSE

You will be able to see all devices instantly with our user-friendly interface.

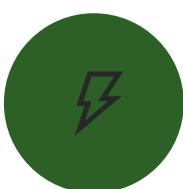

Ideal size and simple communication

The ideal-dimensioned CYSENSE connects through ip address.

Appropriate Use & Notice

With CYSENSE, you may trigger alarms, configure your system, generate reports, and delegate responsibilities to your team at the amount of authority you choose.

Quick Data Tracking

Instantly and retrospectively, you can examine all of the data collected on any CYSENSE devices linked to the system.

HOTSPOT AND FIREWALL
SOFTWARE

Provides secure WIFI sharing

Turkey is a member of the Cyber Security
Cluster

www.cypoint.com.tr

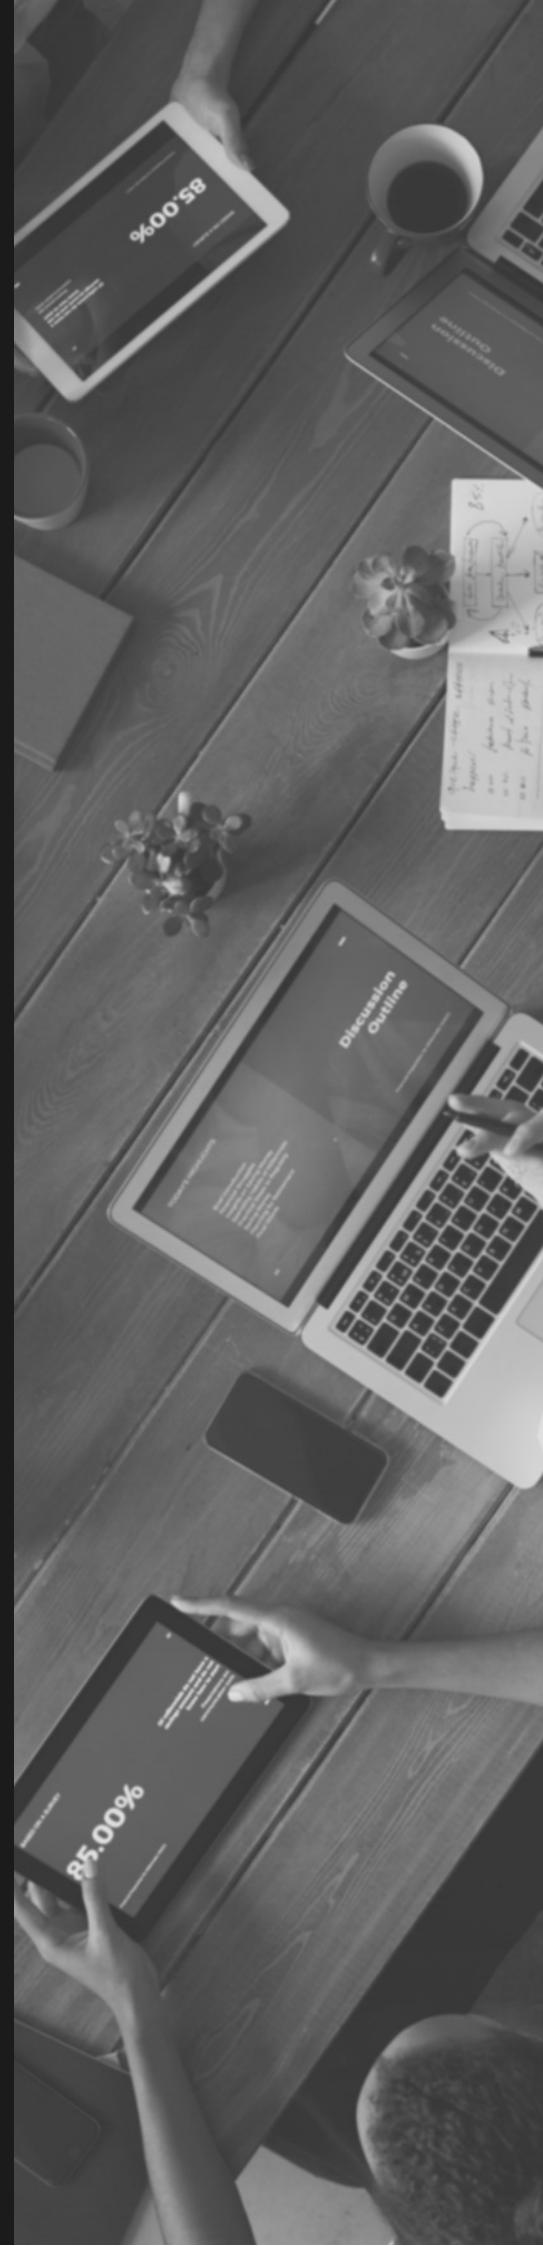

Do you know the obligations of law 5651?

- 1 - You must take steps to retain access records.
- 2 - you must take steps to prevent illicit access.

Otherwise :
You might face penalties such as a 30,000 TL three-day suspension of business operations.

**TAKE CYSPOT DO NOT TAKE
RESPONSIBILITY!**

What is CYSPOT?

- Offers wired or wireless internet access to your guests and customers.
- It is a cloud-based hotspot software.
- It empowers your customers and employees as you wish.
- It can set up paid or free access infrastructure for your network.
- It can record all transactions made on the network.
- It can provide verification infrastructure with TR Identity Number.

Mobile compatible management panel :

Our control panel is mobile friendly, and CYSPOT Mobile Applications for monitoring your infrastructure are in the works.

Management of Independent Locations

With CYSPOT Infrastructure, you can manage all of your points from a single interface.

Notification in Real Time

In an unfavorable case, automatic notice is issued (device failure, harmful use, limit exceeded, etc.).

User Interaction with One Click

With a single click, you may delete the undesired person from your network.

CYTHREAT SIEM

SECURITY INFORMATION AND
EVENT MANAGEMENT

MANAGES RECORDS CENTRALLY WHILE
SAVES TIME.

cypoint

Is a member of the Cyber Security Cluster IN
Turkey

www.cypoint.com.tr

WHAT IS CYTHREAT SIEM

- A records management and alerting system that allows you to centrally collect log records generated by laptop and desktop computers and servers (Windows, Unix, Linux, and so on), network devices, application servers, firewalls, and all other systems in your institution and receive real-time alerts from these records. product.
- CYTHREAT SIEM performs all of the tasks of a SIEM product and may also be used to improve the SIEM product's efficacy at your institution.

PRODUCT FEATURES

- When important events occur, several means (SMS, email, program execution, visual) are used to notify the system administrator.
- The ability to draw parallels between various events (correlation).
- Notification in advance of any problems (disk corruption) that may develop on your user machines.

Why should you use CYTHREAT SEIM?

- It is capable of detecting unrecorded (fake) occurrences.
- It is simple to incorporate into the systems of your server farm.
- With ready warning rules, you will receive quick results.
- There is an inventory of enterprise software and hardware.
- It takes only a few minutes to setup and is ready to use.

CYTHREAT SIEM PROVIDES EASY ACCESS TO DAILY LOGS OF ALL YOUR SYSTEM DEVICES.

PANELS CAN BE CUSTOMIZED

Many ready-made panel content options are available, as well as the ability for users to design their own panels.

Cooperation with security controls is simple.

It aids in meeting the control requirements for security standards and processes such as ISO27001 and PCI.

Inquiries are answered quickly.

It enables you to reply immediately to a request from the prosecutor's office or other relevant authorities on an occurrence on your company computers.

CYTHREAT SIEM

PROTECTING YOUR BUSINESS VALUES

It identifies the sharing of sensitive information in your hands with other organizations and persons ahead of time.

PROACTIVE intervention

By examining the events that occurred before to the security breaches, it is assured that such circumstances are spotted in advance.

QUICK INSTALLATION AND EASY INTEGRATION

Its installation takes only a few hours and it is ready to use.

CYTHREAT SOAR

SECURITY ORCHESTRATION,
AUTOMATION AND RESPONSE

MANAGE SECURITY OPERATIONS FROM A
SINGLE PLATFORM

cypoint

Is a member of the Cyber Security Cluster IN
Turkey

www.cypoint.com.tr

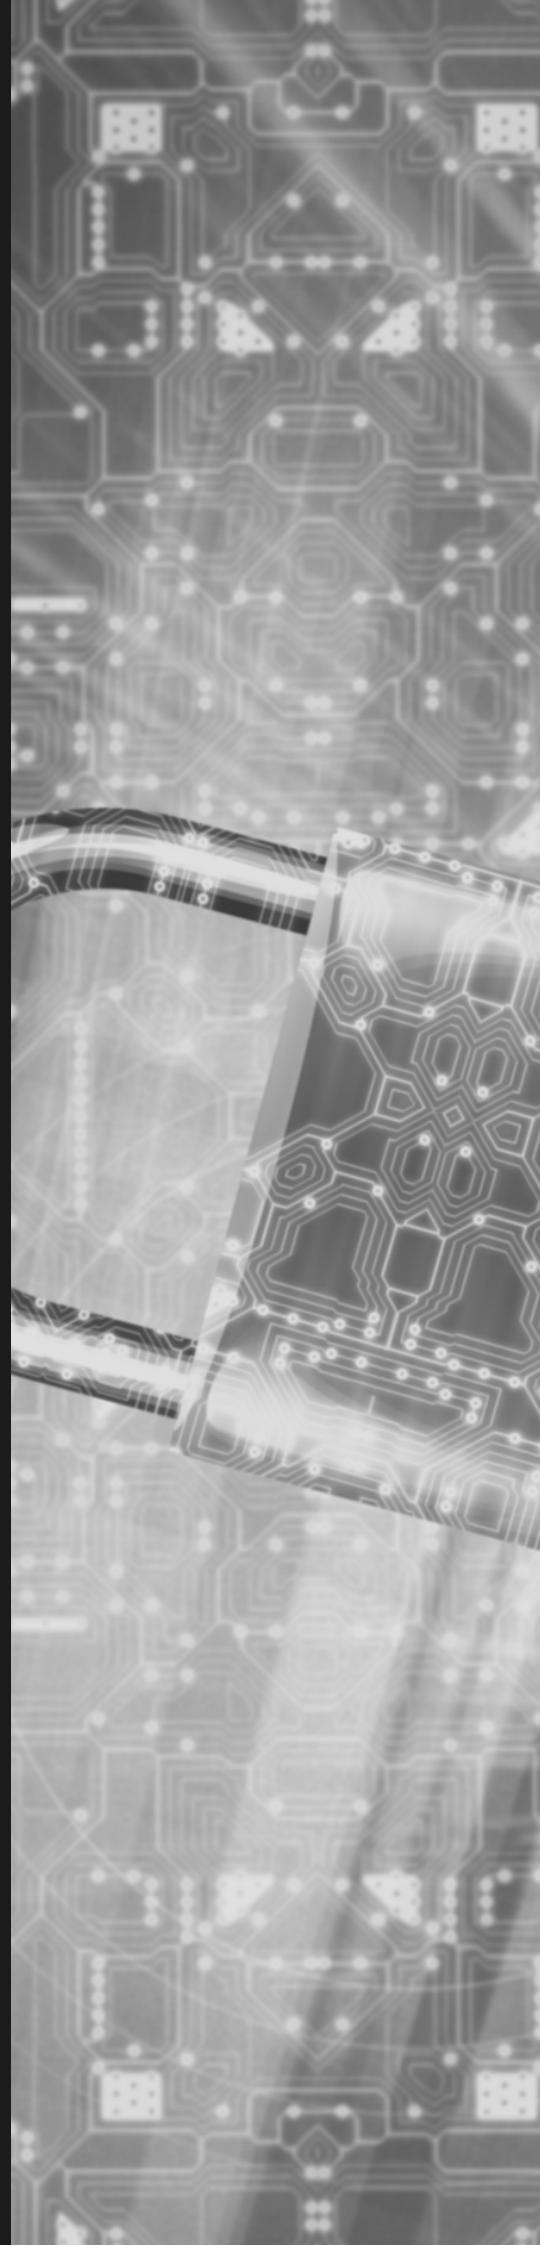

CYTHREAT SOAR

What is CYTHREAT SOAR?

Collecting and arranging security data from a variety of sources.

It is a collection of solutions that are available to enable uniformity and automation.

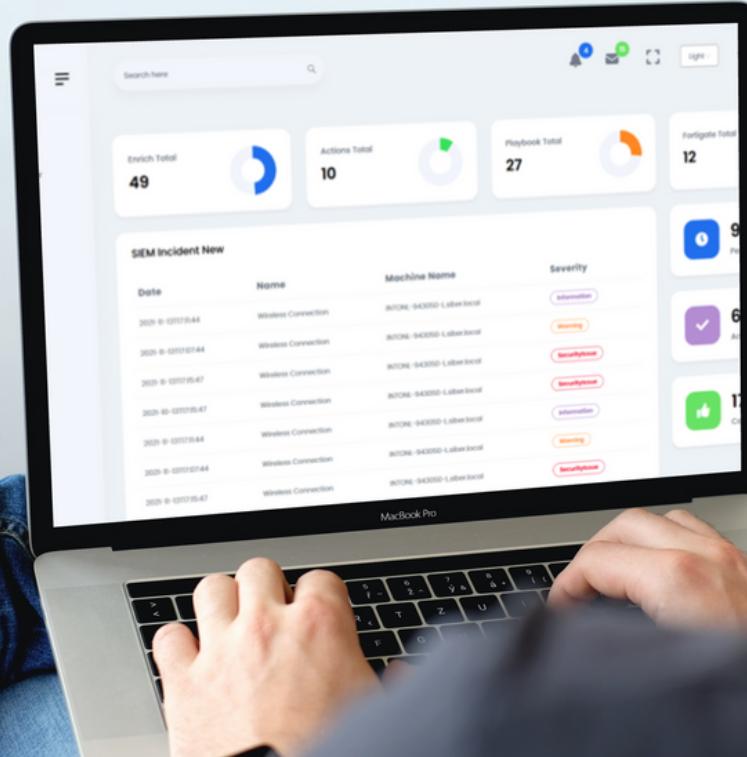

In response to the increased diversity and volume of SOAR data, it improves threat response capabilities and streamlines business operations.

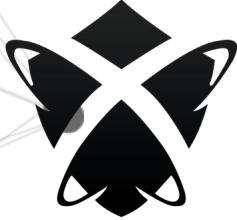

Why should you use CYTHREAT SOAR

Our product has three main components

- safety regulation.
- security automation.
- security response.

- INTEGRATION OF SIEM
- SIMPLE TO ASSEMBLE
- GOAL-ORIENTED
- CONTRIBUTION TO ENHANCED SECURITY OPERATIONS

CYTHREAT DATASKOPE

- A PRODUCT FOR DATABASE EVENT
CONTROL AND ACCESS
MONITORING

SECURITY OPERATIONS CAN BE MANAGED
FROM A SINGLE PLATFORM.

cypoint

Is a member of the Cyber Security Cluster IN
Turkey

www.cypoint.com.tr

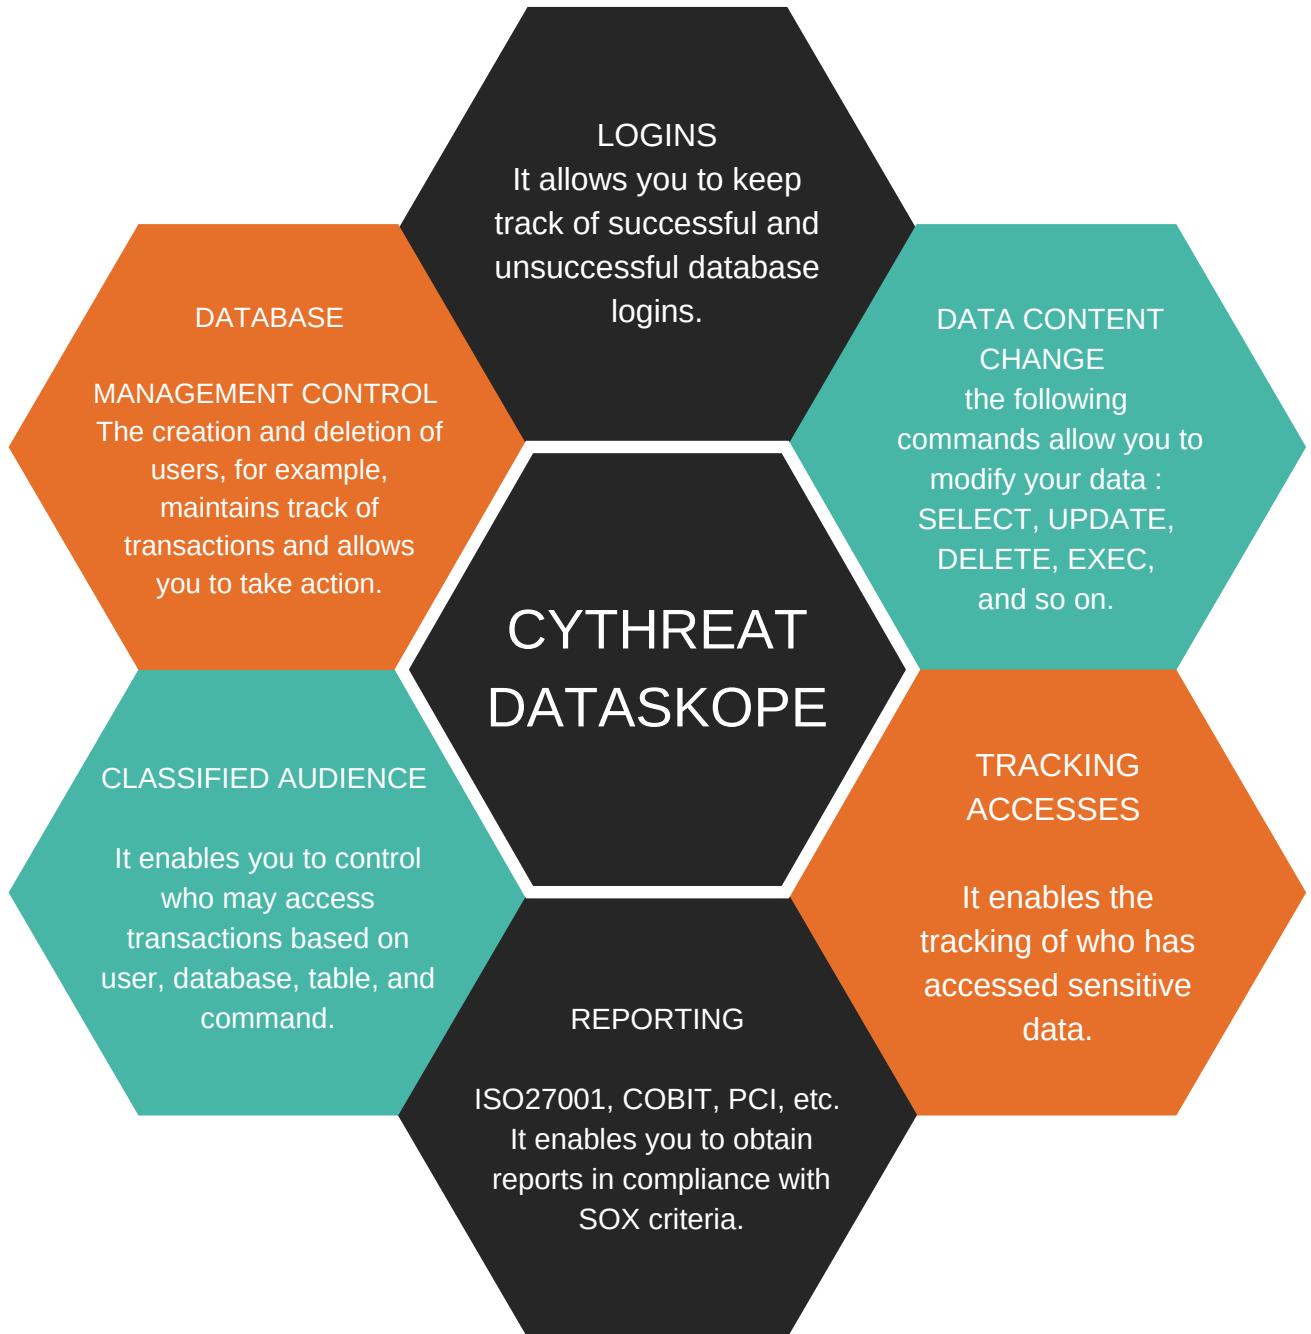

What is CYTHREAT DATASKOPE ?

Examines if essential database system accesses and updates are scheduled as expected. Furthermore, all of these activities may be performed without enabling any auditing features in the database.

**EASY ACCESS AND CONTROL OF
DATABASE EVENT CONTROLS
WITH CYTHREAT DATASKOPE.**

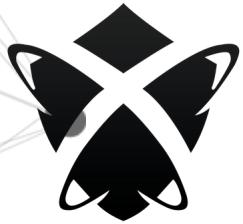

supported platforms

Windows 2008R2+
DB/2 (2019Q1)
RedHatEL5,EL6,EL7
Oracle LinuxEL6, EL7
SUSE EnterpriseLinux
Solaris11+

SQL Server 2008 R2 ve üstü
Oracle11gveüstü (ExaData/TeraDatadahil)
Elastic Search 5 ve üstü
MySQL (2019Q1)
PostgreSQL (2019Q1)
Hadoop (2019Q1)

CYTHREAT APP TRACKER

APPLICATION TRACKING
SOFTWARE

TRACK THE AMOUNT OF USAGE IN LICENSED APPS.

cypoint

Is a member of the Cyber Security Cluster IN
Turkey

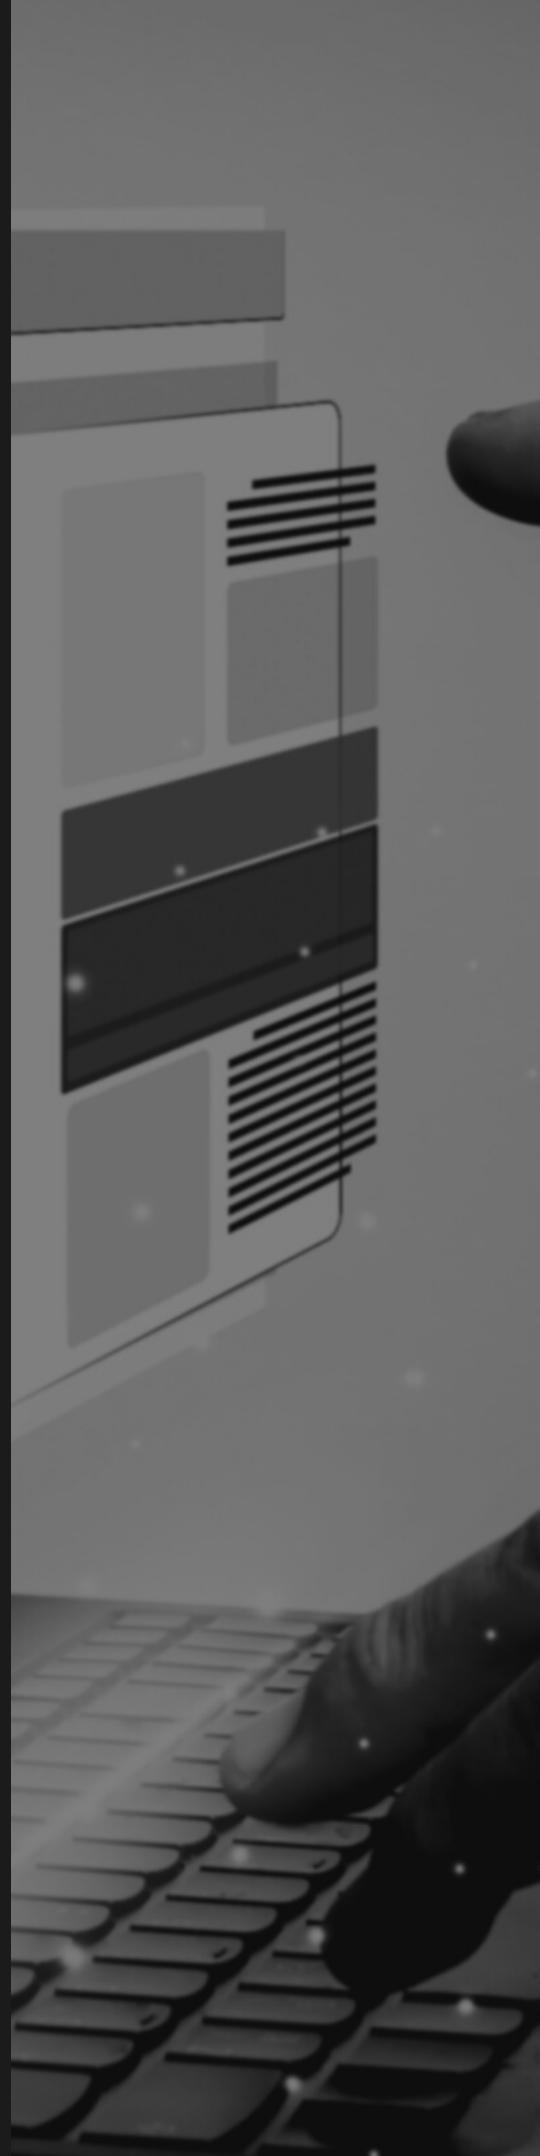

www.cypoint.com.tr

What is CYTHREAT APP TRACKER ?

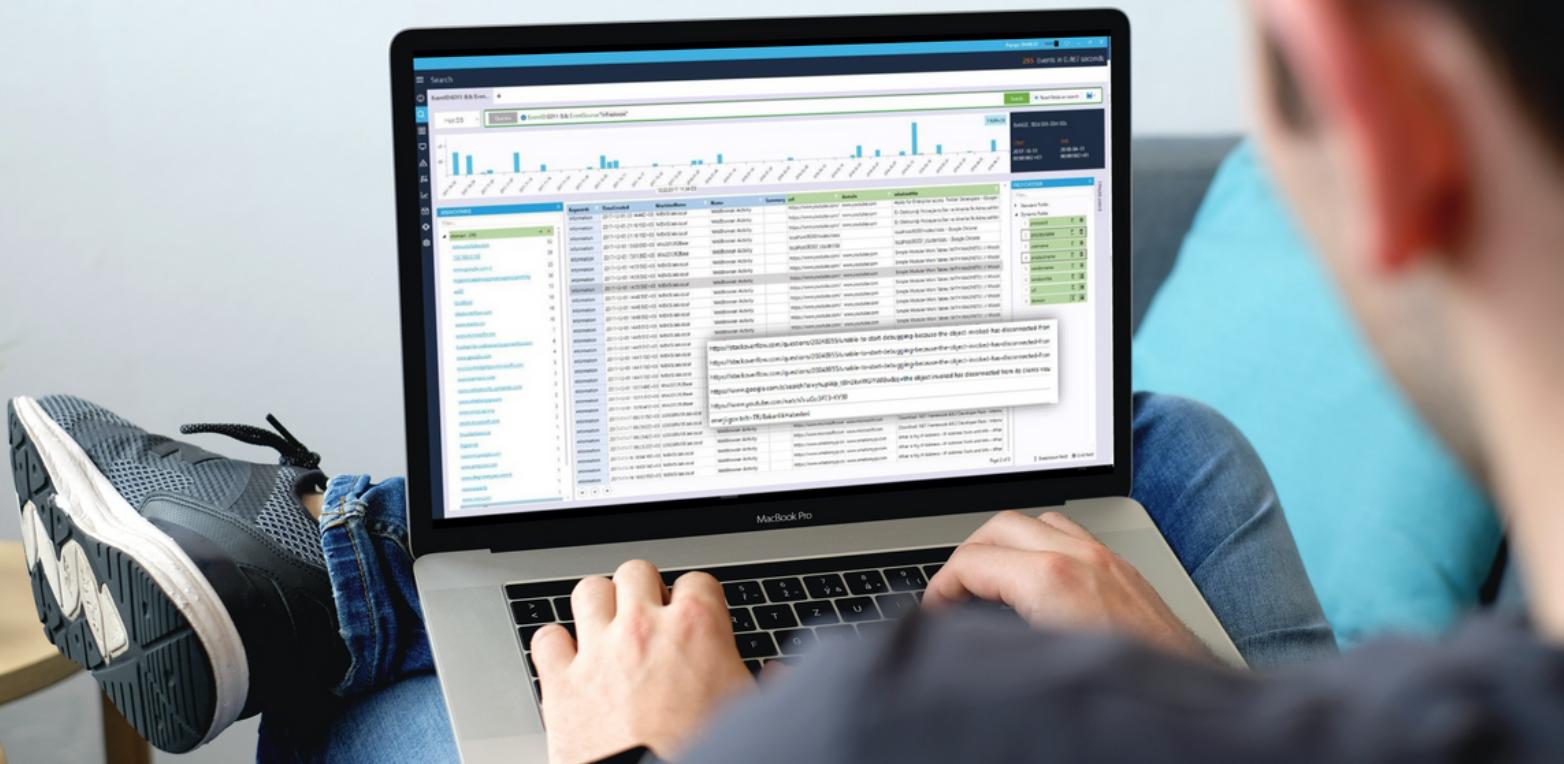

- In user and server systems, it is a software that records which user actively uses which application and for how long.
- It informs you whether the licensed programs, which are supplied and purchased with serious money, are utilized efficiently, so saving you money.
- It indirectly offers information on how employees spend their time.

**DON'T SPEND EXTRA MONEY ON
LICENSED APPLICATIONS THAT
ARE NOT USED ENOUGH.**

Measurements for "active" application use Efficiency of Internet use in the absence of a corporate firewall.

The connections made by CYTHREAT APP TRACKER are recorded regardless of whether the user connects the mobile phone to the access point by USB, BLUETOOTH, or WIFI.

CYTHREAT APP TRACKER BASICALLY FOCUSES ON THESE THREE TOPICS.

- Metrics for "active" app use
- Use of the internet without the use of a corporate firewall
- Productivity

CYTHREAT SCREEN RECORDER

SCREEN RECORD AND MONITORING
SOFTWARE FOR COMPUTERS AND
SERVERS.

EXAMINE THE SOURCE OF THE ISSUES THAT ARE
OCCURRING ON YOUR SERVERS.

cypoint

Is a member of the Cyber Security Cluster IN
Turkey

www.cypoint.com.tr

WHAT IS CYTHREAT SCREEN RECORDER ?

WHAT EXACTLY IS A CYTHREAT SCREEN RECORDER? In its most basic form, this device may be equated to a security camera installed within computers and servers. It videotapes every movement performed on computers and servers. It allows you to monitor in real time or in the past.
